Interests: Machine Learning, Computer Vision, Generative Networks

Education

HSE University / Faculty of Computer Science
BSc in Applied Mathematics and Information Science | Advanced Informatics and Mathematics Track (year 2)
September 2020 - Expected August 2025, Moscow/Russia | Specialization in Machine Learning (years 3-4)
Current GPA: 9.48/10 (Ranked 16th among students, top 6%)

Professional
Experience

Junior ML Engineer / VK (Computer Vision Team) / full-time
July 2024 - Present, Moscow/Russia

- Adapted a vision-language model (VLM) training pipeline to the existing tech stack and improved it.
- Trained a VLM on real user data, outperforming the previous model.
- Designed and executed experiments on architecture and data modifications to enhance model performance.

ML Engineer Intern / Yandex Music / 3 months full-time
July 2023 - October 2023, Moscow/Russia

- Implemented and evaluated several heuristics for candidate selection in the recommender system using Java.
- Analyzed the use of new features for the ranking boosting model.
- Deployed a dashboard with metrics automatically recalculated daily via SQL queries over a large amount of data.

C++ Backend Developer Intern / Yandex Market / 3 months full-time
July 2021 - October 2021, Moscow/Russia

- Developed an algorithm for selecting potentially valuable offers for tracing in an internal MapReduce system.
- Improved the quality of article selection on the front search page of a marketplace, including the calibration of the relevance threshold value.

Publications

Egorov E. A., Rogachev A. I. "Adaptive spectral normalization for generative models"
DOI: [10.1134/S1064562423701089](https://doi.org/10.1134/S1064562423701089)
Published in Doklady Mathematics, Volume 108 (Suppl 2), S205–S214 (2023)

Proposed modifications to the spectral normalization algorithm, enabling adjustable strength in discriminator constraints. Achieved improvement in target metrics over the original method.

- Awarded at AIJ Science 2023.
- The Russian-language version awarded at the HSE Best Russian-language Scientific Papers Competition (2024).

Projects

Projects on Deep Learning for Audio Processing
September 2023 - December 2023

- Implemented several deep learning models based solely on research papers, including [DeepSpeech2](#) for ASR, [SpEx+](#) for speech separation, [HiFiGAN](#) as a vocoder, and [RawNet2](#) for voice anti-spoofing.
- Trained the models from scratch, conducted experiments on architectures and datasets, analyzed results, and compiled findings into reports.

Research Project on Process Mining
November 2021 - June 2022

- Designed an algorithm for process model repair based on hammocks in a graph, including a novel hammock-finding algorithm with its mathematical proof and implementation.

Achievements

Tinkoff Scholarship Awardee for 2023/24

- Passed a competitive selection process among students of IT programs (one of 200 awardees out of more than 13,000 contenders)

Competitive Programming Contests:

- Participated in 42 algorithmic contests on Codeforces, reaching a peak rating of 2177 (top 1% of all users)
- Awardee of the Russian School Olympiad in Informatics 2019 (81st place out of 4,236 pre-finalists)

Skills

Programming Languages	Python, C++, C, Assembly (x86)
Frameworks and Libraries	PyTorch, NumPy, Pandas, PySpark, Scikit-Learn
Tools	Git, LaTeX, SQL, Bash
Languages	English (C1, IELTS Academic Band 8.0), Russian (native)
